

Datablad for BMS 4S 12V 100A

Product Summary :

- Using foreign premium IC class-A protection.
- Professional, high-current wiring design and workmanship thus can withstand the shock of high current
- Using heat-dissipating glue with a double-sided heat dissipation design, heat is dissipated passively
- Physically shock-resistant, waterproof PCB with many protective functions
- Complete over-charge, over-discharge, over-current, short-circuit, and equalization functions

Electrical Parameters: (Room temperature 25°C, humidity 55%)

(NO)	(Description)		(Specification)	(Unit)	Remarks
1	(Discharge)	(Continuous discharge current)	100	A	
2	(Charge)	(Charge voltage)	14.6	V	Adjustable
		(Continuous charge current)	100	A	
3	(Over charge protection)	(Over charge detect voltage)	3.7±0.05	V	Adjustable
		(over charge protection delay)	1	S	Adjustable

		(over charge release voltage)	3.6±0.05	V	Adjustable
4	(Balance)	(Balance detect Voltage)	3.20	V	Adjustable
		(Balance release voltage)	3.20	V	Adjustable
		(Balance current)	30±5	mA	
5	(Over discharge) protection	(Over discharge detect)	2.6±0.1	V	Adjustable
		(Over discharge detect delay)	1	S	Adjustable
		(Over discharge release voltage)	2.7±0.1	V	Adjustable
6	(Over Charge current protection)	(Overcharge current detect)	150±10	A	Adjustable
		(Overcharge current detect delay)	1	S	Adjustable
		(Overcharge current protection release condition)	(Off load)		
7	(Over discharge current protection)	Over discharge current detect	300±50	A	Adjustable
		(Over discharge current detect delay)	1	S	Adjustable
		(Over discharge current protection release condition)	(Off load)		
8	(Short Circuit protection)	(Short Circuit protection condition)	(Short circuit of external load)		
		(Short circuit detect delay)	320	μS	Adjustable
		(Short circuit protection release)	(Off load)		
9	(Temp Protect)	(Charge Temperature protection degrees)	-5~55	°C	Adjustable
		(discharge Temperature protection degrees)	-30~60	°C	Adjustable

10	(Means of communication)	UART (Adjusting Settings) PC Interface Bluetooth (Status Only) Android and iOS	Play Store/ App Store:  SMART BMS		
11	(Inner Resistance)	(Main Circuit Conduct Inner resistance)	<20	mΩ	
12	Self Consumption	(Working current)	15	mA	
		Sleep current (over-discharge)	50	uA	
13	(Working Temp)	(Temp range)	-20~70	°C	
13	(Storing Temp)	(Temp range)	-40~80	°C	

(BMS wiring Connection)

(1) (Product picture)

(Interface definition)

(GROUP)	(NAME)	(PIN)	(DESCRIPTION)	
Battery acquisition equalizer interface	B00	1	Battery Total Negative	
	B01	2	Battery positive electrode 1	
	B02	3	Battery positive electrode 2	
	B03	4	Battery positive electrode 3	
	B04	5	Battery positive electrode 4	
	B05	6	Battery positive electrode 5	
Temperature sensor input port	T1	1	Temperature Line #1	
	GND	2	Common Temperature Line	
	T2	3	Temperature Line #2	
Bluetooth / module interface	GND	1	GND	
	RX	2	Bluetooth communication Receiver	
	TX	3	Bluetooth communication Transmitter	
	BT_3.3V	4	Bluetooth module power supply 3.3 V	
DIO interface	GND	1	GND	
	DO1	2	Switching signal	
	DIO	3	Switching signal	
	3.3V	4	I / O Power Supply 3.3 V	
UART interface	GND	1	GND	
	RX	2	UART communication Receiver	
	TX	3	UART communication Transmitter	

Key switch	KEY	1	Key switch	
	GND	2	GND	
485 interface	485T_B	1	485 Communications B	
	485T_A	2	485 Communications A	
	AGND	3	GND	

(2) (Wiring diagram)

(3) (Wiring operation)

(1) First connect the large (B-) cable of the protection board to the total negative pole of the battery pack

(2) Then connect the small balance cables starting from the black cable connected to B-, the next red cable connects the positive pole of the first string of batteries, and the next string is connected in turn. Once all connected, TEST to ensure the voltages are correct otherwise the unit will be destroyed and warranty void if cables are not wired in the correct order!

(3) Connect to a power supply / charger between P- and the battery Positive to power the unit on. The Bluetooth and MOSFETs will not activate until this step is completed. The power supply must be 0.6V higher than the pack voltage.

Removal: When removing the protection board, first pull out the small balance cables, then remove Power cable B-.

(Warranty)

We guarantee a 2-year product warranty, if the damage is caused by improper operation, we will conduct the repair with charge. The warranty does not cover shipping costs, the cost of shipping both to and from the user must be paid for by the user.

(Additional Information)

1. Lithium battery BMS units with different voltage ranges cannot be mixed. i.e. The LiFePO4 BMS cannot be used for LiPo batteries.
2. We use high quality cables, do not replace the provided cables with any other cables.
3. When testing, installing, or contacting the protective board, take measures to avoid static electricity.
4. Do not let the heat dissipation surface of the protection board directly contact the battery core, otherwise the heat will be transmitted to the battery core, which will affect the safety of the battery.
5. Do not disassemble or change the components of the protection board.
6. The metal heat sink of the protection board is anodized and insulated, and the oxide layer will still be conductive after being destroyed. Avoid contact between the heat sink and the battery core and the nickel strip.
7. If you believe you are experiencing any abnormal operation, discontinue use until verified.
8. Do not use the two BMS units in series.
9. Two or more units can be used in parallel if each unit is capable of sustaining the maximum load current.
10. Every product is tested by engineers before shipping.
